

#### Agitate FAST, Transfer FAST, Load FAST

**PTO Driven** 

**Vertical Pit Pumps** 

#### 6000, 8000, & 8000 High Performance

Built strong - easy to use - delivering powerful results!

# **PTO Drive** Vertical Pit Pumps

The single or dual agitation nozzles flex 5 degrees above to 35 degrees below horizontal. The knife style can be shifted with the PTO speed at idle.

A 3-quart oil reservoir makes it easy to monitor oil level in the bearing pack.

Easily insert pump into pit because it is articulated on twopoint hitch. Enjoy the convenience of all-hydraulic controls or choose manual controls.

A set 1 1 House the state of a state strand and a set

- Choose from two pump mounting options for agitating below-ground liquid-manure storage pit and for loading liquid-manure spreader:
  - 1. Stationary base secured to manure pit or
  - 2. Two-point tractor hitch with hydraulics for tilting (540 or 1,000 RPM).
- Match your pit depth with choice of four pump lengths: 6, 8, 10 and 12 feet (1.83, 2.44, 3.05, and 3.66 m). Large U-bolts allow the frame to be adjusted up or down for precise placement.
- Match your desired speed of transfer and loading with two pump sizes: 6-inch (152 mm) and 8-inch (203 mm).
- Reduce agitation time with dual nozzles that blend crusted manure and settled solids into a liquid slurry fast.
- Get better pit clean-out from agitating every corner by adjusting nozzles (rotating 270° and raising/lowering 20°).

- Choose basic pump or add optional agitation (for pits with no crusting or settled solids).
- Efficient curved impeller blades in a voluted housing save time agitating, transferring, and loading. High-volume pump [up to 3,500 gallons (13,249 liters) per minute]. Transfer or load while agitating.
- Impeller, impeller housing, and shear plate come standard in AR400 abrasion-resisting steel for longer life.
- Get high load-carrying capacity and long service life from tapered roller bearings in oil bath chamber protected by three seals.
- The loading pipe is 20 feet long (6.1 m) and includes a wheeled undercarriage.

High

Performance

now available!

- Reduce maintenance costs and get long service life from heavy-duty gearbox.
- Tractor Requirements: 6000 & 8000, 100 HP minimum; 8000 High Performance, 140 HP minimum.

### 6000 E

High-volume pumping & long service life!

## **Electric Drive Vertical Pit Pump**

Unique plumbing system eliminates need to enter pit. Ask your dealer for details.

> Easily insert pump into pit with user friendly manual riser pipe slide & tilt mount kit.

- A stationary base secured to manure pit is standard on the 6000 E Pump.
- Equipped with choice of two-point tractor hitch for easy insertion and removal from pit for service or manual slide and tilt.
- Match your pit depth with choice of 6, 8, 10, and 12 foot lengths (1.83, 2.44, 3.05, and 3.66 m). Large U-bolts allow the frame to be adjusted up or down for precise placement.
- Get better pit clean-out with optional agitation (nozzle can be rotated horizontally).
- Choose basic pump or add optional agitation (for pits with no crusting or settled solids).
- Efficient curved impeller blades in a voluted housing save time agitating, transferring, and loading. High-volume pump up to 3,000 gallons (11,356 liters) per minute during agitation and 2,200 gallons (8,328 liters) per minute during loading.
- Impeller, impeller housing, and shear plate come standard in AR400 abrasion-resisting steel for longer life.

Ask for more information about remote agitation/storage systems.

Twin motor belt drive system is easier on the upper drive shaft and bearings. (Guard removed for photo.)

- Get high load-carrying capacity and long service life from tapered roller bearings in oil bath chamber protected by three seals.
- End guessing about oil level. Inspect oil level conveniently in transparent reservoir with dipstick at top of pump.
- Horsepower Requirements: Twin 15, 20, 25, or 30 HP, 3-phase motors.

	Optional dual-level agitation and dual elevation control.					Voluted design of the loaded and unloaded, point. As the impeller

For servicing, the bearing pack can be entirely removed from the 6''x 6'' main frame due to the splined shaft.

Voluted design of the housing and curved blades are continuously being loaded and unloaded, keeping a constant positive pressure at the discharge point. As the impeller turns, slurry is forced to the outer band area, which becomes larger as slurry approaches the discharge point. More slurry is being constantly added to the impeller blades as slurry moves away.

**CAUTION:** Never operate Patz equipment without all shields and guards in place. Safety is no accident. Before operating any piece of equipment, be sure to read and understand the operator's manual. This manual should be kept with the machine at all times.

Additionally, make sure all safety shields and devices are functioning properly and are securely in place.

For some photos in this brochure, guards were removed for photographic purposes only to allow viewing of the equipment features. Before operating equipment, all guards must be in place. Because Patz continually improves and updates products, Patz reserves the right to change the construction of machines or attachments or any part thereof without incurring any obligation to make like changes on Patz machines, or attachments previously delivered. Specifications and prices subject to change without notice.
